

The Lubbock National Weather Service Office Presents

2024 WEST TEXAS AVIATION WEATHER SAFETY WORKSHOP

February 13, 2024 at 6:00pm at the Lubbock Science Spectrum

West Texas skies? Buckle up for a wild ride! Dust storms, icing, thunderstorms, and low IFR--we've got it all! Sometimes, Mother Nature throws the whole weather buffet in one day. In aviation, safety isn't an accident; It's a plan. Pilot training lays the foundation, but mastering West Texas skies takes continuous learning. Join us for an evening of action-packed aviation weather presentations.

Why this matters:

- Weather-related accidents claim 1/3 of aviation fatalities.
- The more you know, the safer you, your passengers, and your plane.

What you'll gain:

- Expert insights: Hear from seasoned pilots and meteorologists with experience.
- Real-world tips and tricks: Navigate the ever-changing skies with confidence and knowledge, no matter what Mother Nature throws your way.
- Networking opportunities: Connect with fellow aviators and share your own West Texas weather stories.

Don't let the weather be your copilot. Take control!

Agenda

Anticipating Low Clouds and Fog
Harrison Sincavage, NWS Lubbock

Dealing with Thunderstorms in TAFs
David Hennig, NWS Midland

**Insight into TAF Writing from an NWS
Forecaster's Perspective**
Adam Przepiora, NWS Lubbock
